

Using E-folios as an Assessment Tool for an Online Graduate Program
in
Educational Technology

The web-based Master's of Education in Educational Technology (MEd in Ed Tech) program at the College of Education (COE) at Northern Arizona University (NAU) uses the World Wide Web (WWW) as a medium of delivery, and there is much to be learned from student achievement and their evaluation of the method of delivery and the program content. This poster session will demonstrate how we use E-folios to assess student achievement and their successful completion of the program. It will include: (1) Description of the program, (2) Capstone course requirements and documents, (3) Examples of student E-folios, and (4) Student evaluation comments.
