The purpose of this study was to analyze the cost of technology. There are four major goals of this study. Those are:

- Review the current status of using technology in primary school
- Review the goal of primary school technology plan
- Survey the current budget used for school technology
- Analyze the cost of school technology plan
- Technology at primary school level in Taiwan.

Investigation research method will be applied to collect data from random sampled primary schools. According to the goal of technology plan and reality, this study will conclude unit costs for many infrastructure and network electronics components of advanced telecommunication systems now being installed in schools. A hypothetical case study of the cost of a typical new elementary school needs increased space and creates other factors raise costs.
